AutoCAD for Macintosh, published by Autodesk, is a variant of AutoCAD for Windows developed for Apple Macintosh computers. The Mac variant is typically bundled with the Adobe Creative Suite. AutoCAD 360 is the latest version of AutoCAD. Unlike most previous versions, AutoCAD 360 is available only as a subscription service. Users also pay an annual maintenance fee to use the product. [1] Wikipedia's article on AutoCAD discusses how it was created and the growth of the application since its original release, and has a list of some of the best known features of the software. [2] + More Information

AutoCAD is a commercial computer-aided design (CAD) and drafting software application developed by Autodesk. It was developed and marketed by Autodesk, which is a division of the EMC Corporation. The name "AutoCAD" was introduced in 1983. AutoCAD is also available as a mobile and web app, and versions are available for both Windows and Mac platforms. AutoCAD is one of the most popular desktop CAD tools used for architectural and mechanical drafting. Its key features include: Keyboard shortcuts to common commands, a built-in equation editor, extensive G-Code support, link-based drawing, and the ability to interactively partition a model into multiple sheets. In 2014, Autodesk revealed that it plans to retire AutoCAD by 2019 and replace it with a new, cloud-based tool called Design Web. In June 2017, Autodesk announced that it is discontinuing Design Web. [3] Design Web has the following features: It supports 3D modeling, as well as 2D drawing. It also allows the creation of 3D models with parametric features (such as the ability to create a 3D model with customizable components). It also allows interaction with other 3D modeling tools, such as 3ds Max and Revit. Users can also access the modeling tools through the cloud. Design Web also allows importing of 2D drawings. A benefit of Autodesk's decision to discontinue AutoCAD is that Autodesk will be able to reduce the cost of maintaining the software. Autodesk has indicated that it will continue to support the software and the current version of AutoCAD until May 2019, when it plans to stop support for the product. To upgrade to the new version of AutoCAD, users will have to pay for the new AutoCAD subscription

Hope this helps It would be much appreciated if you make a post in the appropriate forum - PowerBI, PowerMV or PowerBI Enterprise support, as someone will need to be allocated to this issue. Once you have activated your Autocad then, if you have problems, I would suggest opening a PM and asking for help with the code you're using - that would be much easier than us trawling your code for you. Or the microtel for the house in a subdivision in this case. A \$60 million microtel owned by a highly leveraged company based in Detroit is now effectively worthless. It's the largest post-recession financial fiasco in Michigan history. And it's all about getting a loan to build a microtel on a poor site. Remember the humongous loan last year to build a microtel on a low-traffic location in Kent County? That one was paid off last week. This one isn't so lucky. "The Urban City (in metro Detroit) is an odd and troubling amalgam of public and private sector agencies that began with the emergence of Ford's Assembly Plant in 1915. Ford's marketing and press campaigns encouraged the migration of working-class white families to the suburbs in the 1940s and 1950s. These new suburbs were named after wealthy real estate developers, and the local public utilities began building their own, privately owned, water, sewer and telephone systems in order to accommodate the influx of new residents." Ever wonder why folks who live in suburban areas have to buy water from Detroit? In Detroit, it's the normal way of things. But in the suburbs, folks buy it all from Detroit Water and Sewerage Dept. and some towns have taken it a step further, and have
