A review of intimate partner violence among drug-involved women presenting for public health intervention. To examine the prevalence of lifetime and 12-month intimate partner violence (IPV) among drug-involved women presenting for public health intervention at 7 public health departments in the United States. Electronic medical records were searched to identify female patients, aged 18 to 60 years, with an active medical record or a referral in the past year at participating public health departments. IPV was determined from inpatient and outpatient medical records using previously validated indicators. Of the 2,611 women screened, 1,237 had an active medical record and were included in the study. IPV was present in 47% of women. The most common indicator of IPV included either physical abuse [39% of women; odds ratio (OR) = 3.8] or emotional abuse (30%; OR = 3.2). Women with history of IPV (36%) were more likely to be poor (OR = 1.5) and have higher health problems as compared to women without a history of IPV. Approximately half (52%) of drug-involved women presenting for public health intervention were victims of IPV. The high prevalence of IPV suggests that IPV screening and intervention is an important component of drug treatment services for women in the United States.

Learning and memory in the rat: effects of prenatal chronic nicotine exposure on aged rats. This study investigated the effects of chronic nicotine exposure on learning and memory in old rats. The learning and memory of postnatal day 30 male Sprague-Dawley rats were examined by analyzing the abilities of neonatally nicotine-exposed rats to learn a delay eyeblink conditioning task and then to remember the trained responses (conditioned responses) for at least 1.5 h. When the rats were older (postnatal day 80), the effects of neonatal nicotine exposure on learning and memory were assessed by comparing the neonatally nicotine-exposed rats with control rats. The results showed that no significant differences were found in the acquisition and retention of the conditioned eyeblink response between the nicotine-exposed and control rats. Learning and memory were therefore confirmed to be unchanged in aged rats that had been chronically exposed to nicotine during fetal and postnatal development.

See the book *\_Mastering Photoshop\_*, by Keith Haney, published by Taylor & Francis, for information on using Photoshop brushes. Some brushes are used to apply a common effect, such as a spray, light, or burn. Some brushes produce predictable effects. Use these to create interesting images and effects. Photoshop brushes can be used in either the brush tool or paint bucket tool modes. Photoshop includes several types of brushes, depending on the type of image to be modified or how the brush is to be applied. For example, a pen tool brush is used with the paint bucket tool, and a *\_dry brush\_* is used with the brush tool.

**Figure 1.39**: Creating a brush Use the following steps to create a brush: 1. In the New Brush dialog box (see Figure 1.39, image 1), type a brush name, such as *\_FrostyPansy1\_*, and then click OK. 2. To the right of the brush name, click the Brush Preset button (figure 1.39, image 2) to open the Brush Preset dialog box, shown in Figure 1.40. 3. Click the Brush Collection tab, and then in the Brush Type drop-down list, select the type of brush you want to use (see Figure 1.40, image 3). For this exercise, select the Eraser brush. 4. In the Brush Shape drop-down list, select the shape of the brush. The default is square, shown in Figure 1.40, image 4. This is fine for an eraser brush; to create a round or diamond brush for a different effect, choose one from the list. This is shown in Figure 1.40, image 5. 5. Use the Drop-down list for the size of the brush (see Figure 1.40, image 6). You can change the size later, if you wish. 6. Leave the color and opacity fields blank, or use the default settings (see Figure 1.40, image 7). 7. Click OK. 8. With the brush still selected, use the Brushes panel to control the brush (see Figure
